Edition: 2019-10 Replaces: 2016-04 RA78498560_AA

Directional spool valves, direct operated, with manual actuation

Type WMM ...XC

- ▶ Size 6
- ► Component series 5X
- ▶ Maximum operating pressure 315 bar
- ► Maximum flow 60 l/min

ATEX units

For potentially explosive atmospheres

Information on the explosion protection:

- ► Area of application in accordance with the Explosion Protection Directive 2014/34/EU: IM2, II2G, II2D
- ► Type of protection valve:
 - Ex h I Mb X according to EN 80079-38
 - Ex h IIC T6...T4 Gb X according to EN 80079-36
 - Ex h IIIC T80°C...T100°C Db X according to EN 80079-36

Features

- ▶ 4/3, 4/2 or 3/2-way version
- ► For intended use in potentially explosive atmosphere
- ► Porting pattern according to ISO 4401-03-02-0-05 (with or without locating hole)
- ► Type of actuation:
 - Hand lever

Function, section

Type WMM 6...XC valves are manually actuated directional spool valves. They control start, stop and direction of flow. The directional valves basically consist of housing (1), one type of actuation (2) (hand lever), control spool (3), and one or two return springs (4).

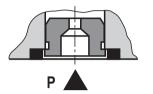

In the de-energized condition, the control spool (3) is held in the central or initial position by the return springs (4). The control spool (3) is moved to the desired spool position by means of the type of actuation.

Detent

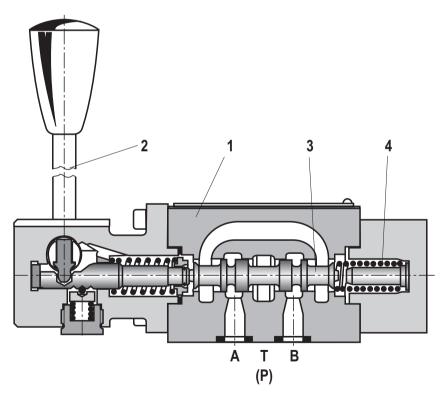

Directional valves with hand lever are optionally available as 2- oder 3-position valves with detent. If types of actuation with detent are used, each spool position can be locked, depending on the valve type.

Throttle insert

The use of a throttle insert is required when due to prevailing operating conditions, flows can occur during the switching processes, which exceed the performance limit of the valve.

Hydraulic fluid		Classification	Suitable sealing materials	Standards	Data sheet
Mineral oils		HL, HLP, HLPD	NBR, FKM	DIN 51524	90220
Bio-degradable	► Insoluble in water	HETG	FKM		
		HEES	FKM	ISO 15380	90221
	► Soluble in water	HEPG	FKM	ISO 15380	
Flame-resistant	► Containing water	HFC (Fuchs: Hydrotherm 46M, Renosafe 500; Petrofer: Ultra Safe 620; Houghton: Safe 620; Union: Carbide HP5046)	NBR	ISO 12922	90223

Important information on hydraulic fluids:

- ► For further information and data on the use of other hydraulic fluids, please refer to the data sheets above or contact us.
- ► There may be limitations regarding the technical valve data (temperature, pressure range, life cycle, maintenance intervals, etc.).
- ► The ignition temperature of the hydraulic fluid used must be 50 K higher than the maximum surface temperature.
- ▶ Bio-degradable and flame-resistant containing water: If components with galvanic zinc coating (e.g. version "J3" or "J5") or parts containing zinc are used, small amounts of dissolved zinc may get into the hydraulic system and cause accelerated aging of the hydraulic fluid. Zinc soap may form as a chemical reaction product, which may clog filters, nozzles and solenoid valves particularly in connection with local heat input.

► Flame-resistant – containing water:

- Due to increased cavitation tendency with HFC hydraulic fluids, the life cycle of the component may be reduced by up to 30% as compared to the use with mineral oil HLP. In order to reduce the cavitation effect, it is recommended if possible specific to the installation to back up the return flow pressure in ports T to approx. 20% of the pressure differential at the component.
- Dependent on the hydraulic fluid used, the maximum ambient and hydraulic fluid temperature must not exceed 50 °C. In order to reduce the heat input into the component, a maximum duty cycle of 50% in continuous operation has to be set for on/off valves (measuring period 300 s). If this is not possible due to the function, an energy-reducing control of these components is recommended, e.g. via a PWM plug-in amplifier.

Information on explosion protection				
Area of application according to Directive 2014/34/EU		IM2	II2G	II2D
Type of protection of valve according to EN 80079-36 / EN 80079-38 ²⁾		EX h I Mb X	Ex h IIC T6 T4 Gb X	Ex h IIIC T80°C T100°C Db X
Maximum surface temperature 3)	°C	100		
Temperature class ⁴⁾		-	T6 T4	_
Temperature 5)	°C	_	_	80 100

- $^{2)}$ Ex h: structural safety c according to EN 80079-37.
- $^{\rm 3)}$ Surface temperature > 50 °C, provide contact protection.
- 4) The specification T4 refers to the maximum hydraulic fluid and ambient temperature. At hydraulic fluid and ambient temperature up to a maximum of 60 °C, use in temperature class T6 is possible.
- 5) The maximum surface temperature of 100 °C refers to the maximum hydraulic fluid and ambient temperature. At hydraulic fluid and ambient temperature up to a maximum of 60 °C, the maximum surface temperature is reduced to 80 °C.

Special application conditions for safe application:

Maximum admissible dust layer thickness according to EN 60079-14.

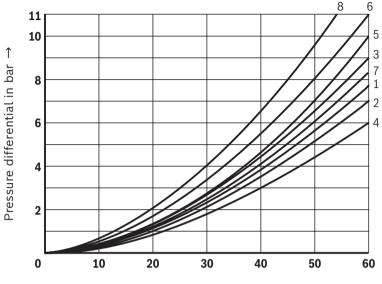

Actuating force/torque

Maximum actuat	ing torque	Ncm	-
Actuating force	▶ Without tank pressure, with/without detent	N	20
	► At a tank pressure of 100 bar	N	30

R	5	5	4	-
Т	8	8	7	7
W	1	1	2	2

Performance limits

(measured with HLP46, ϑ_{oil} = 40 ±5 °C)

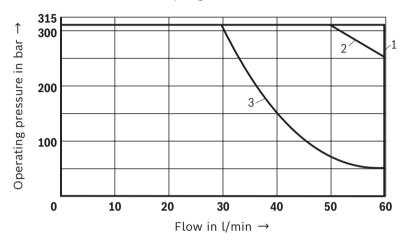

Motice:

The specified switching power limits are valid for operation with two directions of flow (e.g. from P to A and simultaneous return flow from B to T).

Due to the flow forces acting within the valves, the admissible switching power limit may be considerably lower with only one direction of flow (e. g. from P to A while port B is blocked)!

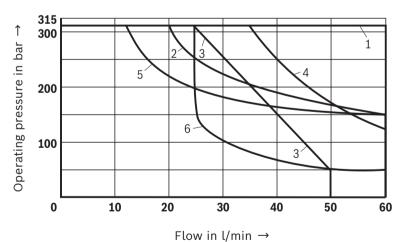

In such cases, please consult us.

Dimensions

(dimensions in mm)

Required surface quality of the valve contact surface

- 1 Name plate
- 2 Porting pattern according to ISO 4401-03-02-0-05 (without or with locating hole for locking pin ISO 8752-3x8-St, material no. **R900005694**, separate order)
- ${f 3}$ Identical seal rings for ports A, B, P and T
- 5 Spool position "a" 1)
- **6** Spool position "b" 1)
- 7 Spool position "0", "a" and "b" (a and b for valves with 2 spool positions 1)
- 8 Valve with 2 spool positions
- 9 Valve with 3 spool positions
- 1) In the actuation area of the hand lever, there must not be any other component. The lever must be prevented from hitting other components.

Valve mounting screws (separate order)

Only use valve mounting screws with the subsequently listed thread diameters and strength properties. Observe the screw-in depth.

4 hexagon socket head cap screws ISO 4762 - M5 x 50 - 10.9

(friction coefficient $\mu_{\text{total}} = 0.09 \dots 0.14$);

Material no. **R913043758**

Subplates (separate order) with porting pattern according to ISO 4401-03-02-0-05 see data sheet 45100.

Motes:

- ► Subplates are no components in the sense of Directive 2014/34/EU and can be used after the manufacturer of the overall system has conducted an assessment of the risk of ignition. The "G...J3" versions are free from aluminum and/or magnesium and galvanized.
- ► The dimensions are nominal dimensions which are subject to tolerances.
